

Exercise 1: Documentation guide

In this exercise, you will use skills you have learnt in the previous modules as well as the documentation skills you have learnt in this module.

Exercise 1.1

Draw an architecture diagram for a project. Go into detail about which tool will be used for each section, and answer the following questions in the diagram:

- Which tool will we use for the transformation?
- Which CI/CD tool will we use?
- How will we test the code?
- Where will the data end up?
- What tool will we use to analyse the data?

Example:

Exercise 1.2

Create user experience documentation for the application to explain what the code is going to do. Include user stories in the style of a kanban board. Keep this simple, as there is limited time for creating the application.

This task will require using an Agile tool to set up the Kanban board.

Example:

To do	In progress	Done
As a User I want this functionality. So that I can do this to my data.		

We will update this as the project goes on.

Exercise 1.3

Write a test case of scenarios to test in the functionality.

Example:

Test ID	Test scenario	Expected result	Accepted criteria	Date implemented
T01	Login functionality	User should be able to log in to the site	Successfully logged in	01/01/24
